- A capsule or suspension that is taken by mouth (oral).
- A clear liquid that is administered as an infusion into a vein (intravenous).

Short-term side effects (within 24 hours)

- Nausea and vomiting
- Diarrhea, gastrointestinal complaints

Long-term side effects

- Elevated blood pressure
- Diabetes
- Headache
- Insomnia
- Impaired kidney function
- Disrupted electrolyte balance

Special instructions

 If your child vomits within 30 minutes after taking the medicine, please check prinsesmaximacentrum.nl/regimens under the heading 'Medicine' to see what you should do.

- Ensure that your child takes this medicine 1 hour before, or 2 to 3 hours after a meal.
- This medicine must **not** be combined with grapefruit (juice), as this can affect the functioning of the medicine.
- Avoid the sun and use sunscreen with a high sun protection factor (SPF).

Specifics

Blood will be sampled regularly to check whether your child is receiving the correct dose, and to limit side effects as much as possible.

This card lists the most common side effects and specifics of this medicine. If you want a complete list, please ask the doctor, nurse, or pharmacist.
